## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-43 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 23 are rejected under 35 U.S.C. 102(b) as being anticipated by Mystkowski et al (Int. Journal of Obesity). Mystkowski discloses a method and device used for magnetic resonance spectroscopy of mice. The device comprises a bird cage RF coil used for transmitting and receiving resonant proton signals. A shimming algorithm was used to correct for magnetic field inhomogeneities. The mouse is then centered and resonant signals are received from the entirety of the animal (see section entitled "Magnetic Resonance Spectroscopy" and Figure 1).

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Kamba et al. (Am. J. Clin. Nutr.). Kamba discloses a method for determining human body composition using non-localized proton MR spectra acquired from the human body using single, free induction decay (FID) (see "Subjects and Methods").

***Allowable Subject Matter***

Claims 12-22 and 33-43 are allowed.

Claims 2-11 and 24-32 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
